Nanodisc Human AGRL1-Strep Protein

HDFP936

Product Information

Product SKU: HDFP936 Expression Host: HEK293 Size: 10μg

Target: AGRL1 Tag: C-Flag&Strep Tag

Additional Information

Conjugate: Unconjugated **Uniprot ID**: O94910

Molecular Weight: The human full length AGRL1-Strep protein has a MW of 162.7 kDa

Protein Information

Background: This gene encodes a member of the latrophilin subfamily of G-protein coupled

receptors (GPCR). Latrophilins may function in both cell adhesion and signal

transduction. In experiments with non-human species, endogenous proteolytic

cleavage within a cysteine-rich GPS (G-protein-coupled-receptor proteolysis site)

domain resulted in two subunits (a large extracellular N-terminal cell adhesion

subunit and a subunit with substantial similarity to the secretin/calcitonin family of

GPCRs) being non-covalently bound at the cell membrane. Latrophilin-1 has been

shown to recruit the neurotoxin from black widow spider venom, alpha-latrotoxin, to

the synapse plasma membrane. Alternative splicing results in multiple variants

encoding distinct isoforms.[provided by RefSeq, Oct 2008]

Synonyms: CIRL1, CL1, LEC2, LPHN1

Protein Description: Human AGRL1-Strep full length protein-synthetic nanodisc

Formulation: Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH

8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization. Please

see Certificate of Analysis for specific instructions. Do not use solvents with a pH

below 6.5 or those containing high concentrations of divalent metal ions (greater

than 5 mM) in subsequent experiments.

Protein Pathways: GPCRDB Class B Secretin-like.

Protein Families: Transmembrane, Druggable Genome.

Usage: Research use only

Storage & Shipping: Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not

intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing

and thawing). Lyophilized proteins are shipped at ambient temperature.
